ACTIVITIES ON-SITE

While we strive to perform overhauls in our own workshop whenever possible, we understand that this may not always be feasible. For this reason, we employ skilled field technicians who are capable of carrying out on-site work as needed. To ensure clear and efficient communication throughout the project, you can expect to work closely with a dedicated foreman or supervisor, who will serve as your primary point of contact. They will assemble a team tailored to the specific requirements of your project, providing you with the expertise and support you need to achieve your goals.

ABOUT US

Remotive is a brand-independent overhaul company that puts honesty and transparency first. Our dream was born in 2015, driven by a passion for delivering the best possible service to our customers. We prioritize transparent communication both with our customers and our employees. We work together as a close-knit team, where each member can count on the other, and new friendships are formed. In our working environment, personal growth and individuality are highly valued. With a good working atmosphere and flexible work environment, we are able to guarantee excellent and fast service to each of our customers. At Remotive, we never compromise on quality. With a strong focus on safety and a commitment to putting quality first, we have become a respected name in the industry.

OUR MISSION

Thanks to our commitment to personal development and outstanding service, we guarantee the best quality for all your technical needs. Our team of highly trained professionals is dedicated to delivering honest and reliable service that tackles any technical challenge that comes your way and saves you precious production time.

“REMOTIVE, WE SAVE TIME”

TURNAROUNDS

When it comes to a shutdown, our top priority is to ensure that everything runs as smoothly and efficiently as possible. Planning and communication are key to this. We begin by carefully mapping out all planned work. From there, we create a comprehensive HSE plan and carry out a TRA. Before we begin any work, we review all the details with our customer and our foreman or supervisor to ensure that everyone is on the same page. This helps to eliminate surprises and allows us to keep downtime to an absolute minimum.

OVERHAULS

At our workshop in Evergem, we have all the essential tools required to restore optimal functionality to a range of equipment, including fans, pumps, electric motors, gearboxes, and blowers. In cases where an overhaul at our own workshop is not feasible, such as for large fans, we also offer the option of carrying out the work at the customer's premises.

GEARBOX INSPECTIONS

Both measuring the backlash and inspecting and bluing the gears can be done by our field technicians on-site.

ATEX ALIGNMENTS

We are currently equipped with specialized equipment that enables us to work in potentially explosive environments.

BALANCING WORKS

Balancing is a standard part of our procedure when servicing machines, both in our own workshop and on-site.

VIBRATION MEASUREMENTS/THERMOGRAPHY

Vibration measurements and thermography allow us to assess the health and performance of a machine fleet. By conducting precise measurements and thorough analyses, we are able to identify the necessary steps required for both maintenance and production levels. This not only allows production to be re-optimized but can even prevent potential breakdowns and minimize downtime. Transparent reports are always provided based on these measurements as well.
